Carnosinase is a glycoprotein with an isoelectric point of 4.4. The active enzyme is a diner, with the two subunits being connected by at least one disulphide bond. The enzyme is especially active in hydrolysing carnosine and anserine. Carnosinase is found in high concentration in the brain. Homocarnosine is hydrolysed in the brain, and carnosine and anserine are split in the blood stream by carnosinese. Carnosine and anserine are thought to act as cytosol buffering agents. Carnosinase its agonists and antagonists and compositions containing them are useful for the prevention and/or treatment of Alzheimer's disease and cognitive disorders, development abnormalities and foetal deficiencies, neurodegenerative disorders such as amyotrophic lateral sclerosis, back host of disease, schizophrenia, abnormal mental states, ischaemic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim

                                                                                                                                                          The invention relates to full length GENSET human nucleic acids encoding CC potentially secreted proteins. The nucleic acids and the polypeptides CC they encode may be used in the prevention, treatment and diagnosis of Cd diseases associated with inappropriate GENSET gene expression. For CC example, they be used to treat disorders associated with decreased GENSET CC gene expression by rectifying mutations or deletions in a patient's CC genome that affect the activity of GENSET or by supplementing the CC patients own production of GENSET polypeptides. Conversely, antisense CC nucleic acid molecules may be administered to down regulate GENSET CC expression. The sense and antisense nucleic acids may also be used as DNA CC probes in diagnostic assays to detect and quantitate the presence of CC patients may be in need of restorative therapy. The GENSET polypeptides CC may be used as antigens in the production of antibodies and in assays to detect and shence to determine which come the used as antigens in the production of antibodies and in assays to determine may be in need of restorative therapy. The GENSET polypeptide of the production and activity. The present sequence is a GENSET polypeptide of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    र्

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC ABR48145) and their coding sequences (ACC50344-ACC50856). The proteins CC and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular CC disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary CC system disorders, muscular disorders, reproductive disorders, immune CC gastrointestinal disorders pulmonary disorders, renal disorders, for CC groliferative disorders and/or cancerous diseases and conditions, for count healing and epithelial cell proliferation, to treat inflammation or infection, for treating thrombosis and arteriosclerosis, for treating or cC preventing neural damage which occurs in neuronal disorders or neurodegenerative conditions such as Alzheimer's disease and Parkinson's CC disease, to enhance bone and periodontal regeneration and aid in tissue transplants or bone grafts, to prevent skin aging or hair loss, to combination with other cytokines, to maintain cransplants growth and differentiation with other cytokines, to maintain cransplants, to increase or decrease differentiation or proliferation of cembryonic stem cells, or to modulate mammalian characteristics or metabolism. (HUMA-) HUMAN GENOME

Rosen Ç, Ruben SM

2003-029900/02 ABZ71261.

New human secreted proteins and nucleic acids, useful for detecting, preventing, diagnosing, prognosticating, treating and/or ameliorating e.g. gastrointestinal diseases and disorders, or cancers.

Claim 13; Page 984-986; 1216pp; English.

CC protein genes, and ABP00011-ABP00299 represent the proteins they encode.

CC ABZ71479-ABZ71540 represent human secreted protein genomic fragments. The cinvention also encompasses antibodies specific for the secreted proteins, compasses antibodies specific for the secreted proteins.

CC the use of the secreted proteins in drug screening, and recombinant compasses and host cells comprising a nucleic caid of the invention. The compasses are caid of the invention. The compasses are caid of the invention. The compasses caid of the invention of the secreted protein and conditions include disorders of preventing compasses. Such conditions include disorders of the mouth, coesophagus, stomach, small intestine, large intestine, liver, biliary coesophagus, stomach intestine, large intestine, liver, biliary coesophagus, stomach intestine, liver, biliary coesophagus, stomach, small intestine, large intestine, liver, biliary coesophagus, small intestine, large intestine, liver, biliary coesophagus, small intestine, large intestine, liver, ABZ71190-ABZ71478 represent cDNAs corresponding to 178 human secreted

        The invention relates to isolated nucleic acid molecules ADB91065-ADB91448 and ADB91835-ADB91911 encoding human secreted proteins ADB91445 ADB91844. Also disclosed is a recombinant vector comprising a polynucleotide of the invention, and a recombinant host cell comprising the recombinant vector. The polypeptide of the invention is useful in identifying a binding partner by contacting the polypeptide with a binding partner, and determining whether the binding partner increases a decreases activity of the polypeptide. The polypeptide, polynucleotide, antibody or its fragment, agonist or antagonist are useful for preparing a pharmaceutical composition for diagnosing or treating diabetes or conditions related to diabetes. The present sequence is that of the human conditions related to diabetes.
                                                                                                                                                                                                       Nucleic acid encoding a human secreted protein is useful treating diabetes or conditions related to diabetes.
                                                                                                                                                                                                                                                                                                                                21-MAR-2001; 2001US-0277340P.

The invention relates to a novel human secreted polypeptide comprising a CC defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antagonist of the invention may be useful for preparing a composition for diagnosing or treating a CC haemopoletic or haematologic disorder such as anaemia, autoimmune CC disorders such as rheumatoid arthritis, inflammation, Grave's disease, CC diabetes, systemic lupus erythematosus or glomerulonephritis, at least of the control of the polypeptide with a binding partner disorders including CC therapy procedures and for identifying a binding partner by contacting the polypeptide with a binding partner and determining whether the control of the current sequence is that of the human secreted protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human secreted polypeptides and the polynucleotides encoding them. The sequences are useful for preparing medicaments for preventing, treating or ameliorating medical conditions e.g., cancer, liver disorders such as hepatitis or neural disorders such as hazaeimer's disease. This sequence represents a human secreted

                                                                               8
                                                                                                                                                                         CC AAZ65250 to AAZ65350 represent 97 isolated human secreted protein genes. CC AAY76124 to AAY76223 are the secreted proteins encoded by the 97 human CC genes. The gene encoding this protein was found to be on chromosome 18q22 CC -23. The genes and their corresponding secreted polypeptides are useful CC for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by CC determining the amount of the new polypeptides in a sample or by CC determining the presence of mutations in the new genes. Specific uses are CC described for each of the 97 genes, based on which tissues they are most CC thighly expressed in, and include developing products for the diagnosis or CC diseases, inflammation, allergies, Alzheimer's and cognitive disorders, CC diseases, inflammation, allergies, Alzheimer's and cognitive disorders, CC diseases, inflammation, allergies, based on which tissues they are most CC diseases, inflammation, allergies, Alzheimer's and cognitive disorders, CC diseases, inflammation, allergies, backlears, sepsis, skin disorders, CC diseative/endocrine disorders, infections and AIDS. The polypeptides are also useful for identifying their binding partners. The sequences shown or AAY76224 to AAY76424 represent fragments of the secreted proteins
                                                                                                                Query Match

Administering (which modulates protease activity in vitro) may be used to treat a disease or disorder selected from cancers (e.g., of tissues, of blood or haematopoietic origin, of the breast, colon, lung, prostrate, cervical, brain, ovarian, bladder or kidney), immune-related diseases and disorders, cardiovascular disease, brain or neuronal-associated diseases (e.g., central or peripheral nervous system diseases, migraine, pain, sexual dysfunction, mood disorders, attention disorders, neurological disorders, hypotension, hypertension, psychotic disorders, neurological disorders and dyskinesias), metabolic disorders and inflammatory disorders such as those above. AAU72876-AAU72910 represent human protease amino acid sequences of the invention

The method involves contacting a test compound and metalloprotease polypeptide, selected from a human metalloprotease polypeptide, termed 55954, and determining if 55054 binds the test compound. The metalloprotease, 55054 is useful for making a pharmaceutical composition for inhibiting the ability of a cell selected from a neural cell such as glial cell or neuron (a sensory neuron or olfactory sensory neuron), astrocyte, oligodendrocyte and ensheathing cell, to cleave a polypeptide. The present sequence represents the human material neuronease a 50149 eptide. The present sequence represents the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying modulator of neural cell growth or transition metal neurotoxicity, involves contacting test compound with novel human metalloprotease polypeptide and determining if the polypeptide bir test compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 507
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          metalloprotease, 55054
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        04-APR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           25-SEP-2000; 2000US-0235055P

The present invention relates to the isolation of novel human PRO CC polypeptides, and the polynucleotide sequences encoding them. The PRO CC polypeptides are secreted and transmembrane proteins. The PRO CC polypeptides and polynucleotides are useful in diagnosing or treating contributes bone and/or cartilage disorders (e.g. sports injuries, contributed by the proteins insulin deficient states (e.g. diabetes mellitus, contributed by the proteins of the properties associated with schonlein-Henoch purpura, celiac disease, contemporathies and penetics and probability of the contemporation or Crohm's disease. The PRO polymucleotide sequences may be used as hybridisation probes in chromosome and gene contemporating properties, in assays to identify other proteins or confecules involved in binding reaction, to generate transgenic animals or confecules involved in binding reaction, to generate transgenic animals or confecules are also useful in gene therapy, and as molecular weight the protein solved in diagnostic assays for PRO polypeptides and nucleic acid confecules are also useful in gene therapy, and as molecular weight sources. ABU69103-ABU69125 represent the human PRO polypeptides of the polypeptides from recombinant cell culture or natural pounces. ABU69103-ABU69125 represent the human PRO polypeptides of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a new isolated nucleic acid which encodes a PRC polypeptide. The methods and compositions of the present invention are useful for the diagnosis and treatment of disorders associated with the PRO polypeptides, such as diabetes, obesity and hypoinsulinaemia. The present sequence represents the amino acid sequence of a human secreted and transmembrane PRO polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated, secreted and transmembrane PRO polypeptides and encoding nucleic acids, useful for the diagnosis and treatment of disorders such as diabetes, obesity and/or hypoinsulinemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

The present invention relates to the isolation of novel human PRO CC polypeptides, and the polynucleotide sequences encoding them. The PRO CC polypeptides are secreted and transmembrane proteins. The PRO CC polypeptides and polynucleotides are useful in diagnosing or treating non circuit, graft-versus-host disease, stroke, cardiac ischaemia, cc psoriasis, inflammatory bowel disease stroke, cardiac ischaemia, cc psoriasis, inflammatory bowel disease or asthma. The PRO polynucleotide gequences may be used as hybridisation probes in chromosome and gene cc mapping, or in generating antisense RNA and DNA. They are also useful in preparing PRO polypeptides, in assays to identify other proteins or cc molecules involved in binding reaction, to generate transgenic animals or cc molecules animals, which in turn are useful in the development and cc screening of therapeutically useful reagents, for chromosome cc identification, and tissue typing. The PRO polypeptides and nucleic acid conscules are also useful in gene therapy, and as molecular weight conscules are also useful in gene therapy, and as molecular weight markers for protein electrophoresis purposes. Anti-PRO antibodies may be used in diagnostic assays for PRO polypeptides, or for the affinity curvention. ABU69080-ABU69102 represent the human PRO polypeptides of the cc invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The nucleic acids and polypeptides are useful for treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome (AIDS), cancer, differentiation disorders, cell adhesin disorders, neural receptor disorders, skin disorders or diabetic complications. The nucleic acids are useful as hybridisation probes, in chromosome and gene mapping and in generating antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, disgnostics, biosensors or bioreactors. Both are useful in tissue typing. The present sequence represents the amino acid sequence of a PRO polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 507

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
```

Claim

```
The invention describes an isolated secreted and transmembrane PRO CC polypeptide (I), having at least 80% identity to or scoring at least 80% CC polypeptide (I), having at least 80% identity to or scoring at least 80% CC positives when compared to, a sequence (S1) comprising 246, 440, 197, 97, CC 273, 571, 209, 888, 502, 310, 251, 800, 507, 248, 223, 134, 136, 468, CC specification. An anti-(I)-antibody is useful for determining the expression and/or activity of (I). (I) and the CC presence of (I) in a certain the growth of tumour cells, and for centibody are useful for inhibiting the growth of tumour cells, and for CC the preparation of a medicament useful in the treatment of a condition CC which is responsive to (I) or the antibody. A polynucleotide (II) CC encoding (I) is also useful for isolating full-length PRO cDNA for CC generating transgenic animals or knock-out animals, which are, in turn, CC are useful in the development in the screening of therapeutically useful creagents, and in gene therapy. PRO is useful in assays to identify other CC proteins or molecules involved in binding interactions, for screening cinhibitors or agonists of binding interactions and for screening chemical libraries. (I) is useful as molecular weight marker for protein constitute assays for PRO, in affinity purification. Ab is useful in CC diagnostic assays for PRO, in affinity purification of PRO, and for CC detection of PRO in biological samples. This is the amino acid sequence CC of a novel human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated secreted and transmembrane polypeptides, designated as polypeptides e.g. PRO1484, PRO4334 and PRO1122, useful for inhibiting tumor cell growth, and for preparing medicaments for therapeutic use.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       12; Fig 26; 201pp; English.

```
The invention relates to an isolated, secreted and transmembrane CC identity to any one of the 23 100-900 residue amino acid sequences, given CC in the specification or to a sequence encoded by a nucleic acid molecule CC deposited under any one of the ATCC accession numbers given in the specification. Also included are an isolated nucleic acid molecule as gequences given in the specification, (or a nucleotide sequence encoding CC at least 80 % sequence identity to any one of 23 400-3500 nucleotide acid molecule having CC at least 80 % sequence identity to any one of 23 400-3500 nucleotide sequence of CC DNA deposited under any ATCC accession numbers given in the specification) CC or at least 80 % identity to a nucleotide sequence encoding spo, lacking CC DNA deposited under any ATCC accession number given in the specification) CC or fRO, a chimeric molecule comprising the vector preparation of CC pRO, a chimeric molecule comprising pRO fused to a heterologous amino CC pRO, a chimeric molecule comprising pRO is useful for identifying the vector arrangemists of pRO, preparation of CC ant/agonists or antagonists of pRO, preparating a variant of PRO, as chimeric molecules of PRO, preparating a variant of PRO, as molecular weight markers and pRO nucleic acid is useful for recombinantly CC expressing the interference of PRO. PRO nucleic acid is useful as a molecular weight markers and pRO nucleic acid is useful as a antisense of pRO. PRO nucleic acid is useful as a antisense pRO is also useful as therapeutic agent. PRO is continued and to probe in chromosome and gene mapping, in generation of CC antisense probe markers pRO is also useful as a processing those markers pRO is also useful in the development and screening of conditions which in turn are useful in the development and screening of conditions and propose in the propose for PRO, for affinity purification of PRO, and for the propose of medicament for treating conditions which is responsive to the propose of medicament for treating conditions which is responsi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid that encodes a PRO polypeptide. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of inflammation, nephropathies, bone and cartilage disorders, such as arthitis and disorders that affect glucose or free fatty acid (FFA) uptake, such as diabetes, hypoingulinaemia or hyperingulinaemia. The PRO polypeptides are also useful as molecular weight markers or for chromosome identification. The PRO genes are useful as hybridisation probes or for screening libraries of human cDNA, genomic DNA or mRNA. The PRO genes may also be used in gene therapy and antisense therapy. The present sequence is human
                                                                                                                                                                    Sequence 507
                                                                                                                                                                                                             used in gene therapy PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 12; Fig 26; 203pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     encoding them. The methods and compositions of the present invention as useful for the diagnosis, prevention and/or treatment of inflammation, nephropathies, bone and carrilage disorders such as arthritis and disorders that affect glucose or free fatty acid (FFA) uptake such as diabetes, hypoinsulinaemia and hyperinsulinaemia. The PRO peptides are useful as molecular weight markers and for chromosome identification. The PRO genes may also be used in gene therapy and antisense therapy. The present sequence is human PRO protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC The invention describes an isolated secreted and transmembrane PRO
CC polypeptide (I) having at least 80% amino acid sequence identity to fully
CC defined sequences of 246, 440, 197, 97, 273, 571, 209, 888, 502, 310,
CC 251, 800, 507, 248, 223, 134, 136, 468, 322, 221, 194, 125 or 339 amino
CC acids as given in the specification. (I) is useful for tissue typing, as
CC molecular weight markers or as therapeutic agents. A polynucleotide (II)
CC encoding (I) is useful for chromosome identification, gene therapy,
CC tissue typing or as hybridisation probes in chromosome and gene mapping.
CC pRO1484, PRO1890, PRO1887, PRO4353, PRO4357, PRO4405, PRO5737 and PRO5990
CC is useful for treating sports injuries and arthritis. PRO14044, PRO1122,
CC PRO1389, PRO4357, PRO4380 and PRO4356 are useful for treating diabetes.
CC PRO4324, PRO4424, PRO4434, PRO4439, PRO1890, PRO1895, PRO1895, PRO4324, PRO4424, PRO4436, PRO6300 and PRO4499 are useful for treating
CC thalassaemia. PRO4380, PRO6300 and PRO4499 are useful for treating diabetes.
CC thalassaemia. PRO4380, PRO6300 and PRO4499 are useful for treating diabetes.
CC thalassaemia or Crohn's disease. This is the amino acid sequence of a covel human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The invention describes 23 nucleic acids encoding human secreted and transmembrane PRO polypeptides. The PRO polypeptides and nucleic acids are useful for the therapeutic treatment of cancerous tumours. The PRO polynucleotide is useful in molecular biology, including uses as
                                                                                                                                                               Twenty three nucleic acids encoding PRO polypeptides, chromosome and gene mapping, in generating antisense I

The polymuclectide may all be used in preparing PRO polypeptides by recombinant techniques, and generating either transgenic animals or knock-out animals which, in the are useful in the development and screening of therapeutically useful reagents. This is the amino acid sequence of a novel human secreted an transmembrane protein PRO1484.

The invention relates to the use of one or more genes associated with CC carnosine metabolism, and/or their variants, and/or their parts, and/or their 5' and/or 3' flanking regions, for determining diabetic nephropathy CC (DN), or a predisposition/susceptibility to DN. CC Also described are: (1) a method of determining diabetic nephropathy, or can early stage of DN, or a predisposition/susceptibility to DN. CC development of DN, or a predisposition/susceptibility to the CC development of DN, or an early stage of DN, or a predisposition/susceptibility to DN; (2) a kit CC predisposition of the configuration/condition/status of a mucleic acid associated with carnosine metabolism, at the genomic, transcriptional, CC translation and/or post-translational level in a patient sample; and (3) a method for identifying compounds for the treatment and/or prevention of CC (CN1) gene and/or the carnosinase 2 (CN2) gene. The method and kit of the cranscription are useful for determining diabetic nephropathy (DN), or an CC early stage of DN, or a predisposition/susceptibility to DN. The CC disease can be detected at an early stage allowing preventive and/or therapeutic measures to be started earlier. This sequence represents to be started earlier. This sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                The present invention relates to the identification of depression associated protein isoforms (DPIs), particularly the tryptic digest peptides of these proceins. Some of the DPIs (AAU28404-AAU28625) described are decreased in the cerebrospinal fluid (CSF) of BAD (bipolar affective disorder) subjects, whilst other DPIs (AAU28626-AAU28887) are increased in BAD subjects. Also described are peptide sequences identified from DPI-45 and DPI-213 and the nucleic acid sequence they are encoded by. The sequences of the invention are useful for clinical screening, diagnosis, prognosis, therapy and prophylaxis of neuropsychiatric disorders e.g. BAD (also known as bipolar mood disorder, SP), maniac-depressive illnesses, attention deficit disorders. The present sequence represents the amino acid sequence for DPI-45 and DPI-213
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel nucleic acid encoding a protein associated with bipolar affective disorder, which is used for diagnosis, prophylaxis and therapy of neuropsychiatric disorders, such as bipolar affective disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         24-FEB-2000; 2000GB-00004412.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   These protein isoforms, e.g. SPI-206, SPI-238 and SPI-240 are detectable in cerebrospinal fluid, serum or plasma and are useful markers of schizophrenia. The sequences can be used for treatment and diagnosis of schizophrenia, screening, prognosis, monitoring the results of therapy, identifying patients most likely to respond to a particular therapy and identification of new targets for drug treatment. SPI DNA is useful as a nucleic acid probe to detect the presence of nucleic acids or SPIs

                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to methods and compositions for screening, CC diagnosis and prognosis of Schizophrenia. The method involves detecting CC the presence of Schizophrenia (SCH) Associated Peatures (SFS) and SCH Associated Protein Insoforms (SPIB) in samples, e.g. by electrophoresis, CC immunoassay or hybridisation assay, for diagnosing and monitoring SCH, CC studying the effectiveness of treatments and for identifying potential CC therapeutic agents. The method is used for (1) screening or diagnosis of CC SCH and the relative abundance of at least 1 chosen feature correlates (CC SCH and the presence or absence of SCH; and (2) monitoring the effect of CC schizophrenia and activity of the SFS, SFIS and related molecules (e.g. CC expression and activity of the SFS, SFIS and related molecules (e.g. CC secondary messengers) are studied to diagnose SCH, monitor the progress of the disorder and the effectiveness of treatment and as targets to CC identify and produce potential therapeutic agents for the treatment of CC SCH. The paucity of detectable neuralyic defects distinguishes considerations of anatomical and biochemical changes have been identified CC in many cases. Consequently the identification and characterisation of CC cellular and/or molecular causative defects and neuropathies are CC necessary for improved treatment of neuropsychiatric disorders. ANUIS114-ANUIS762 represent the amino acid sequences of schizophrenia-associated consoforms used in the method of the invention

                                                   CC hybridises to two short nucleic acid sequences and the 1515 amino acid CC sequence fully defined in the specification. Also described are: a CC preparation comprising an isolated peptide coded for by the nucleic acid CC molecule above, or comprising an isolated human protein comprising one or more of the following sequences: Glu-Leu-Asp-Val-Leu-Gln-Gly-Arg, and Gly CC -Ile-Leu-Ile-Leu-Gln-Glu-Gln-Asp-Thr-Leu-Gly-Gly-Arg; methods for CC diagnosing Schizophrenia; antibodies capable of immunospectic binding to CC schizophrenia, and methods of screening for agents that modulate a CC characteristic (e.g., expression or binding activity) of an SPI. an SPI canalogue, or an SPI-related polypeptide. The nucleic acid molecule and CC encoded proteins, as well as the methods and compositions are useful for screening, diagnosing, and prognosing Schizophrenia, for monitoring the effectiveness of Schizophrenia treatment, for identifying patients most CC developing drug. They are also useful for screening modulators of CC schizophrenia. Associated protein isoform useful for rereating Schizophrenia. This is the amino acid sequence of schizophrenia.

CC associated protein isoform SPI-238/SPI-240 fusion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid molecule, useful for diagnosing Schizophrenia, for monitoring the effectiveness of Schizophrenia treatment or for screening agents for treating Schizophrenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           schizophrenia diagnosing; schizophrenia prognosing; Schizophrenia treatment; drug development; cerebrospinal fluid; human; SPI-238; SPI-240.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention describes an isolated nucleic acid molecule (I) that
